

# THE FLATMATE AUSSIE DRIVER

Caravan Edition

**WARNING:** Why 50% of Caravan Blowouts Are YOUR Fault!  
Not Road Debris!

**INSIDE:** Discover the  
SIMPLE, TESTED System  
That Unlocks  
UNPARALLELED Safety  
and GUARANTEED  
Protection.

**UNPROTECTED!** Are You Betting Your \$200,000 Rig on the  
#1 Lie About Caravan Tyres?

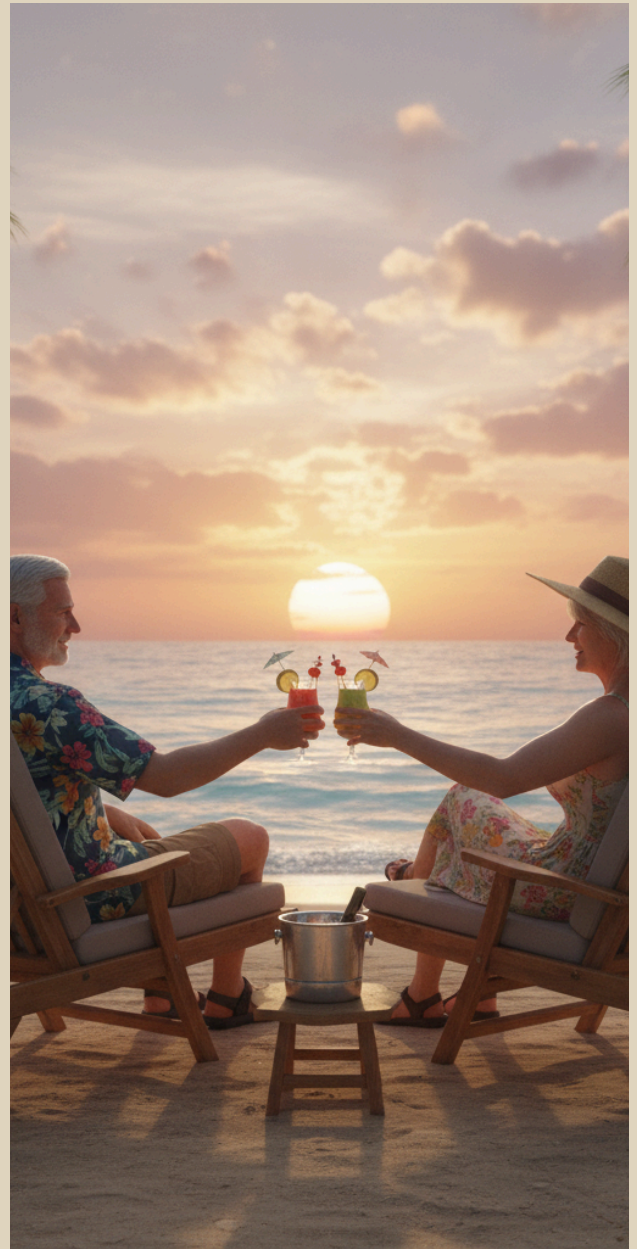

# THE WORST-CASE SCENARIO IS GUARANTEED TO KILL YOUR ADVENTURE.

You've invested heavily in your rig and your caravan. You're planning the BIG LAP or just a weekend escape with the family. But the truth is, every time you tow your investment onto the highway, you are betting your safety on a component you NEVER properly check: the tyre.

We're not talking about a simple flat. We're talking about the SHOCKING reality of a high-speed DUAL AXLE tyre blowout. The momentum of a heavy van hitting the brakes due to blowout pressure can trigger catastrophic sway and a total loss of control.

The result is not a simple pull-over. It's a rollover that destroys your assets, your tow vehicle, and potentially, your DREAM trip.

**REALISE THIS:** That disaster is EASILY preventable. The single biggest cause of caravan blowouts is not road debris—it's HEAT caused by under-inflation. It's a risk you've been IGNORING.

# THE ALARMING TRUTH: YOUR VAN'S TYRES ARE A TIME BOMB

## Fact: The Science of Failure

This is not conjecture. This is fact, PROVEN by decades of road science:

## The WORST Statistic You Need To Know:

Almost 50% of all caravan tyre failures are caused by under-inflation. Not road debris. Not age. Under-inflation.

Under-inflated tyres generate excessive heat, weakening the tyre structure and making it susceptible to blowouts. That heat is the silent killer.

Your caravan tyres lose pressure constantly because you are towing your entire Aggregate Trailer Mass (ATM) for hours on end. A small change of just 4–6 PSI creates friction, that friction creates heat, and heat creates FATAL blowouts.

## The Hidden Cost (The MONUMENTAL Waste):

This isn't just about SAFETY; it's about MONEY.

Fuel efficiency is reduced by one per cent for every 20 kPa (2.9 PSI) of under-inflation. Driving your heavy RIG under-inflated is a DIRECT attack on your FORTUNE.

The extra rolling resistance forces your engine to work harder, GUARANTEEING higher fuel costs and UNPARALLELED premature tyre wear.

# THE ULTIMATE DEFENCE: THE SIMPLE FORMULA FOR SURVIVAL

You need the eyes that never blink and the warning that never lies. We ENGINEERED the Flatmate TPMS system specifically for the dual demands of Australian towing.

## The Learning Curve: Aussie Tyres and the Outback

Caravan tyres can naturally lose 1-2 PSI per month. Temperature changes affect pressure instantly, especially when you tow from the coast to the OUTBACK. You need constant, reliable data—not a manual gauge you check at a service CENTRE once a month.

### 1. The Unparalleled Monitoring System (Flatmate TPMS)

This is the UNPARALLELED and RELIABLE defence for your ENTIRE rig. Our multi-sensor kit instantly connects sensors on your 4x4 and your caravan.

- The Immediate Alert: This monitor is positioned right on your dash, giving you a clear, EASY-to-read, high-contrast display. The second a tyre drops below the STURDY pressure level—or, critically, starts heating up—you get a piercing, ALARMING notification. No guessing. No delaying.
- Long-Range Security: Our system is PROVEN to transmit clearly over the HUGE distance of a long tow, ensuring you PROTECT the vulnerable rear axle at all times. This is peace of mind, mile after mile.

### 2. The Immediate, Field-Ready Correction Tool (Flatmate SURGE Air Pump)

The TPMS gives you the WARNING. Our POWERFUL portable pump gives you the IMMEDIATE fix. You are NOT changing a caravan tyre on the side of the highway! The pump allows you to correct minor pressure drops QUICKLY and safely, right where you are. It's the EDGE that prevents a high-speed blowout from ever happening.

Crucial Note: This combination gives you the ultimate organisation in tow safety: Warning (TPMS) + Correction (Pump). It's essential armour for the open road.

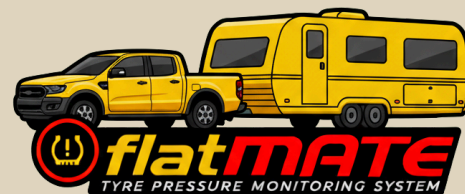

# FINAL WARNING: STOP COMPROMISING YOUR INVESTMENT.

## The Cost of Guesswork

Every moment you tow without the Flatmate TPMS, you are exposed to a WORST-case scenario that could have been eliminated with a SIMPLE investment.

Stop risking your FORTUNE and your freedom on guesswork.

This isn't a cost; it's the GUARANTEED insurance policy for your adventure. You protect your rig, you protect your holiday, and you protect your family's safety.

**FINAL ACTION REQUIRED:** You've REALISED that under-inflation destroys your FORTUNE (up to 2% fuel loss for every 10% pressure drop) and risks a FATAL blowout. Stop losing money and risking everything.

**DISCOVER** the ULTIMATE Car & Caravan Bundle NOW at

[www.flatmate-tpms.com](http://www.flatmate-tpms.com). PROTECT your assets and UNLOCK UNPARALLELED SECURITY for your entire RIG.

The Flatmate TPMS 'Zero Tyre Loss' Guarantee. We are so confident in our heat and pressure detection that if you suffer a blowout on your caravan caused by under-inflation or heat while using our system correctly, we will replace the sensors and pay for your damaged tyre.
